

Project Proposal (Proposed Solution)

Date	28 June 2026
Team ID	
Project Name	LaunchPad AI – Smart Business Idea Evaluation System
Maximum Marks	5 Marks

Project Proposal(Proposed Solution) Report

Project Overview	
Objective	To develop an AI-powered startup idea evaluation system that helps entrepreneurs validate their business ideas using Google Gemini AI. The system provides Startup Analysis, SWOT Analysis, Market Analysis, and Business Recommendations through an interactive Flask web application, enabling users to make informed business decisions before launching their startups.
Scope	The project covers the complete development of an AI-powered web application, including user interface design, backend development, AI integration, database management, and deployment. Users can enter startup details such as startup name, business idea, target audience, business model, and product features. The system analyzes the information using Google Gemini AI and generates structured reports with valuable business insights. The application is intended for entrepreneurs, startup founders, students, innovators, and small business owners.
Problem Statement	
Description	Many aspiring entrepreneurs struggle to evaluate their startup ideas due to limited business expertise, lack of market research, and expensive consulting services. Existing methods of business validation are often time-consuming and may not provide personalized recommendations. There is a need for an intelligent AI-powered system that can quickly analyze startup ideas and provide meaningful business insights to support better decision-making.
Impact	● Helps entrepreneurs validate startup ideas quickly. ● Reduces the cost and time required for business evaluation. ● Provides AI-powered business insights and recommendations. ● Supports informed decision-making before launching a startup. ● Encourages the adoption of Artificial Intelligence in entrepreneurship and innovation.

Proposed Solution	
Approach	The proposed solution uses a Flask-based web application integrated with Google Gemini AI to evaluate startup ideas. Users enter startup details through an intuitive web interface. The backend validates the input, generates structured prompts, and sends them to the Gemini AI model. The AI analyzes the startup idea and returns Startup Analysis, SWOT Analysis, Market Analysis, and Business Recommendations. The generated reports are displayed on the dashboard and stored in an SQLite database for future reference.
Key Features	• User-friendly Flask web application. • Startup idea submission form. • AI-powered Startup Analysis. • SWOT Analysis generation. • Market Analysis. • Business Recommendations. • History of previous analyses. • Secure API key management using environment variables. • Responsive user interface. • Deployment on Render with GitHub integration.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Processor	Intel Core i3 or above
Memory	RAM	Minimum 4 GB
Storage	Disk Space	Minimum 2 GB free storage
Software		
Frameworks	Web Framework	Flask
Libraries	Python Libraries	Flask, Flask-SQLAlchemy, Google GenAI, Python-dotenv, Markdown, Gunicorn, Jinja2
Development Environment	IDE & Platform	Python 3.10+, Visual Studio Code, Git, GitHub, Render
Data		
Database	Data Storage	SQLite using SQLAlchemy
AI Service	AI	Google Gemini 2.5 Flash API

Deployment	Cloud Platform	Render
Version Control	Source Code Management	Git and GitHub
